💡 Step-by-Step Breakdown

1. **Start the program** and introduce the simulation to the user.
    - Greet the user.
    - Explain that the goal is to see how well they manage money through 8 life situations.
2. **Initialize your variables.**
    - Set your starting money to 20.
    - Set each tracking variable — *responsible*, *kind*, *aware*, and *mathematical* — to 0.
3. **Begin a loop** that continues as long as you still have money (while your money is greater than 0).
4. **Display your current balance.**
    - Tell the user their current bank amount at the start of each situation.
5. **Go through each situation (1 through 8).**
   For each situation:
    - Present a short story or scenario.
    - Offer two choices (option A and option B).
    - For each option, describe how the user's money changes.
    - For each option, note how the user's financial traits (responsible, kind, aware, or mathematical) change — adding or subtracting points as given.
6. **Apply the effects of the user's choice.**
    - Adjust the user's money according to their decision.
    - Modify the related trait score (e.g., responsible +1 or -1).
7. **Repeat** this process for all eight situations:
    - Situation 1 tests *responsibility.*
    - Situation 2 and 5 test *kindness.*
    - Situation 3 and 8 test *awareness.*
    - Situation 4 and 6 test *mathematical thinking.*
    - Situation 7 tests *responsibility* again.
8. **Check your balance after each situation.**
    - If your money drops to 0 or below, end the loop.
9. **End the game.**
    - Print a final message ("End of game.").
    - If the user's money is 0 or negative, indicate they are in debt.
10. **Display final scores.**
    - Show the final amount of money left.
    - Summarize the totals for *responsible, kind, aware,* and *mathematical* traits.

🍋 Situation 1: The Lemonade Stand Kickoff

Goal: Financial Responsibility
Setup: You've just earned $20 from your first lemonade stand.
Choices:

- a) Spend $10 on fun stuff.
- b) Save all your earnings.
  Results:
- a → `your_money - 10`, `responsible - 1`
- b → `your_money + 10`, `responsible + 1`

🤏 Situation 2: The Brother's Borrow

Goal: Financial Kindness
Setup: Your brother asks to borrow some money.
Choices:

- a) Lend half of your money.
- b) Lend nothing.
  Results:
- a → `your_money × 0.5`, `kind + 1`
- b → `your_money × 1`, `kind - 1`

🫥 Situation 3: The Street Stranger

Goal: Financial Awareness
Setup: A stranger offers to double your money next week if you lend all of it today.
Choices:

- a) Give all your money.

- b) Keep it.
  Results:
- a → `your_money = 0`, `aware - 1`
- b → `your_money × 1`, `aware + 1`

🧐 Situation 4: The Payout Puzzle

Goal: Mathematical Thinking
Setup: You can take either a lump sum or daily payments.
Choices:

- a) Take $80 now.
- b) Take $14 per day for 7 days.
  Results:
- a → `your_money + 80`, `mathematical - 1`
- b → `your_money + 98`, `mathematical + 1`

🥴 Situation 5: The Friendly IOU

Goal: Financial Kindness
Setup: A friend needs $20 and promises to repay $10.
Choices:

- a) Lend the $20.
- b) Refuse to lend.
  Results:
- a → `your_money - 10`, `kind + 1`
- b → `your_money - 0`, `kind - 1`

😮‍💨 Situation 6: The Deal Dilemma

Goal: Mathematical Reasoning
Setup: You spot two special offers.
Choices:

- a) Buy 10 for $18.

- b) Buy 5 for $12.
  Results:
- a → `your_money - 18`, `mathematical + 1`
- b → `your_money - 12`, `mathematical - 1`

🎲 Situation 7: The Gamble or Guarantee

Goal: Financial Responsibility
Setup: You can take $50 now or risk for double next week.
Choices:

- a) Gamble and wait.
- b) Take the safe $50.
  Results:
- a → `your_money - 100`, `responsible - 1`
- b → `your_money + 50`, `responsible + 1`

🥸 Situation 8: The Mysterious Donation

Goal: Financial Awareness
Setup: A person asks you to donate 30% to an unverified college.
Choices:

- a) Decline to donate.
- b) Donate 30%.
  Results:
- a → `your_money × 1`, `aware + 1`
- b → `your_money × 0.7`, `aware - 1`

End of Game

- If `your_money ≤ 0` → “You’re in debt! Game over.”
- Else → Display final scores for `responsible`, `kind`, `aware`, and `mathematical`.
